Thin Solid Films 262 (1995) 245–247

thin solid films

Subject Index of Volume 262

Adhesion
enhanced adhesion of copper to dielectrics via titanium and chromium additions and sacrificial reactions 154
Ammonia
passivation of Cu via refractory metal nitridation in an ammonia ambient 199
Amorphous materials
W–B–N diffusion barriers for Si/Cu metallizations 218

Catalysis
room-temperature oxidation of silicon in the presence of Cu_3Si 187
Chemical vapour deposition
carrier-gas effects on characteristics of copper chemical vapor deposition using hexafluoro-acetylacetonate-copper (1) trimethylvinylsilane 12
chemical additives for improved copper chemical vapour deposition processing 46
CVD of copper using copper(I) and copper(II) β-diketonates 60
hydrogen-atom assisted CVD of copper at low temperatures and in-situ gas-phase spectroscopy studies 39
in situ mass spectral and IR studies of the role of auxiliary reagents in the enhancement of copper growth in the chemical vapor deposition of Cu(II) β-diketonate precursors 20
in-situ measurement of gas-phase reactions during the metal–organic chemical vapor deposition of copper using Fourier-transform infrared spectroscopy 209
metal–organic chemical vapor deposition of copper using hydrated copper formate as a new precursor 1
reactor transport effects in copper APCVD 31
selective chemical vapor deposition of copper using (hfac) copper(I) vinyltrimethylsilane in the absence and presence of water 52
selective chemical vapor deposition on excimer-laser-patterned polytetrafluoroethylene from hexafluoroacetylacetonate copper (I) vinyltrimethylsilane 7
selective CVD-W for capping damascene Cu lines 120
Contacts
W–B–N diffusion barriers for Si/Cu metallizations 218
Copper
carrier-gas effects on characteristics of copper chemical vapor deposition using hexafluoro-acetylacetonate-copper (1) trimethylvinylsilane 12
chemical additives for improved copper chemical vapour deposition processing 46
copper interconnection integration and reliability 84
Cu–metal interfacial interactions during metal organic chemical vapour deposition 224
CVD of copper using copper(I) and copper(II) β-diketonates 60
diffusion of copper through dielectric films under bias temperature stress 168
electroless copper deposition for ULSI 93
electromigration in copper conductors 135
encapsulated copper interconnection devices using sidewall barriers 104
enhanced adhesion of copper to dielectrics via titanium and chromium additions and sacrificial reactions 154
hydrogen-atom assisted CVD of copper at low temperatures and in-situ gas-phase spectroscopy studies 39
in situ mass spectral and IR studies of the role of auxiliary reagents in the enhancement of copper growth in the chemical vapor deposition of Cu(II) β-diketonate precursors 20
in-situ measurement of gas-phase reactions during the metal–organic chemical vapor deposition of copper using Fourier-transform infrared spectroscopy 209
in-situ ultra-high vacuum studies of electromigration in copper films 129
low-temperature passivation of copper by doping with Al or Mg 234
lower temperature plasma etching of Cu using IR light irradiation 67
metal–organic chemical vapor deposition of copper using hydrated copper formate as a new precursor 1
photolithographic metallization of fluorinated polymers 73
reactor transport effects in copper APCVD 31
room-temperature oxidation of silicon in the presence of Cu_3Si 187
selective chemical vapor deposition of copper using (hfac) copper(I) vinyltrimethylsilane in the absence and presence of water 52
selective chemical vapor deposition on excimer-laser-patterned polytetrafluoroethylene from hexafluoroacetylacetonate copper (I) vinyltrimethylsilane 7
selective CVD-W for capping damascene Cu lines 120
thermal stability of copper interconnects fabricated by dry-etching process 124
thermal stability of on-chip copper interconnect structures 177
thermal strain and stress in copper thin films 142
W–B–N diffusion barriers for Si/Cu metallizations 218

Deposition process
selective chemical vapor deposition of copper using (hfac) copper(I) vinyltrimethylsilane in the absence and presence of water 52
selective chemical vapor deposition on excimer-laser-patterned polytetrafluoroethylene from hexafluoroacetylacetonate copper (I) vinyltrimethylsilane 7
Dielectrics
diffusion of copper through dielectric films under bias temperature stress 168

Elsevier Science S.A.

Diffusion
encapsulated copper interconnection devices using sidewall barriers 104
passivation of Cu via refractory metal nitridation in an ammonia ambient 199
W–B–N diffusion barriers for Si/Cu metallizations 218

Electrochemistry
electroless copper deposition for ULSI 93
Electromigration
copper interconnection integration and reliability 84
electromigration in copper conductors 135
encapsulated copper interconnection devices using sidewall barriers 104
in-situ ultra-high vacuum studies of electromigration in copper films 129
low-temperature passivation of copper by doping with Al or Mg 234
Electronic devices
copper interconnection integration and reliability 84
CVD of copper using copper(I) and copper(II) β-diketonates 60
low-temperature passivation of copper by doping with Al or Mg 234
Etching
lower temperature plasma etching of Cu using IR light irradiation 67
thermal stability of copper interconnects fabricated by dry-etching process 124

Fourier transform infrared spectroscopy
in situ mass spectral and IR studies of the role of auxiliary reagents in the enhancement of copper growth in the chemical vapor deposition of Cu(II) β-diketonate precursors 20
in-situ measurement of gas-phase reactions during the metal–organic chemical vapor deposition of copper using Fourier-transform infrared spectroscopy 209

Growth mechanism
chemical additives for improved copper chemical vapour deposition processing 46
reactor transport effects in copper APCVD 31

Hydrogen
CVD of copper using copper(I) and copper(II) β-diketonates 60

Insulators
photolithographic metallization of fluorinated polymers 73
Interfaces
enhanced adhesion of copper to dielectrics via titanium and chromium additions and sacrificial reactions 154

Mass spectroscopy
metal–organic chemical vapor deposition of copper using hydrated copper formate as a new precursor 1
Metallization
chemical additives for improved copper chemical vapour deposition processing 46
electroless copper deposition for ULSI 93
enhanced adhesion of copper to dielectrics via titanium and chromium additions and sacrificial reactions 154
carrier-gas effects on characteristics of copper chemical vapor deposition using hexafluoro-acetylacetonate-copper (1) trimethylvinylsilane 12
lower temperature plasma etching of Cu using IR light irradiation 67
selective chemical vapor deposition of copper using (hfac) copper(I) vinyltrimethylsilane in the absence and presence of water 52
selective CVD-W for capping damascene Cu lines 120
thermal stability of copper interconnects fabricated by dry-etching process 124
thermal stability of on-chip copper interconnect structures 177
thermal strain and stress in copper thin films 142

Organometallic vapour deposition
Cu–metal interfacial interactions during metal organic chemical vapour deposition 224
in-situ measurement of gas-phase reactions during the metal–organic chemical vapor deposition of copper using Fourier-transform infrared spectroscopy 209
Oxidation
thermal stability of copper interconnects fabricated by dry-etching process 124
room-temperature oxidation of silicon in the presence of Cu_3Si 187

Photodesorption
lower temperature plasma etching of Cu using IR light irradiation 67
Planarization
copper interconnection integration and reliability 84
Plasma processing and deposition
in situ mass spectral and IR studies of the role of auxiliary reagents in the enhancement of copper growth in the chemical vapor deposition of Cu(II) β-diketonate precursors 20
Polymers
photolithographic metallization of fluorinated polymers 73
selective chemical vapor deposition on excimer-laser-patterned polytetrafluoroethylene from hexafluoroacetylacetonate copper (I) vinyltrimethylsilane 7

Reaction kinetics
reactor transport effects in copper APCVD 31
Resistivity
in-situ ultra-high vacuum studies of electromigration in copper films 129
low-temperature passivation of copper by doping with Al or Mg 234

Semiconductors
carrier-gas effects on characteristics of copper chemical vapor deposition using hexafluoro-acetylacetonate-copper (1) trimethylvinylsilane 12
thermal strain and stress in copper thin films 142
Silicides
room-temperature oxidation of silicon in the presence of Cu_3Si 187
Stress
encapsulated copper interconnection devices using sidewall barriers 104
thermal strain and stress in copper thin films 142
Surface diffusion
in-situ ultra-high vacuum studies of electromigration in copper films 129

Titanium nitride
passivation of Cu via refractory metal nitridation in an ammonia ambient 199
Titanium oxide
passivation of Cu via refractory metal nitridation in an ammonia ambient 199
Tungsten
selective CVD-W for capping damascene Cu lines 120
Whiskers
metal–organic chemical vapor deposition of copper using hydrated copper formate as a new precursor 1
X-ray photoelectron spectroscopy
Cu–metal interfacial interactions during metal organic chemical vapour deposition 224
